Rise and run of an interval

PRACTICE

NAME _____ DATE _____

EXAMPLE **Find the run and rise of the interval PQ.**

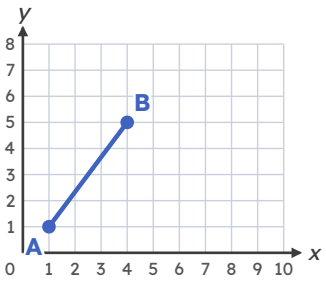

1. Read the coordinates: P(2, 2) is (x_1, y_1) and Q(6, 5) is (x_2, y_2).
2. **Run** = $x_2 - x_1 = 6 - 2 = 4$
3. **Rise** = $y_2 - y_1 = 5 - 2 = 3$
4. Check on the grid: 4 squares across and 3 squares up.

Run = 4 units, rise = 3 units

YOU DO **Questions 1–6: the first letter is (x_1, y_1). Find the run and rise of each interval.**

REMEMBER Run = $x_2 - x_1$ · Rise = $y_2 - y_1$ · If the interval goes down, the rise is negative.

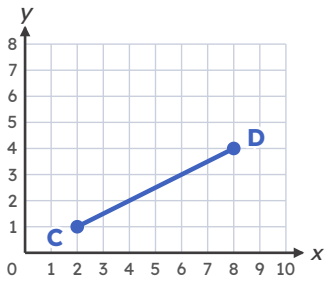

1

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

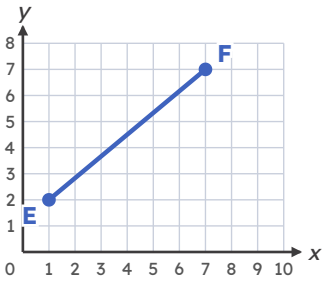

2

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

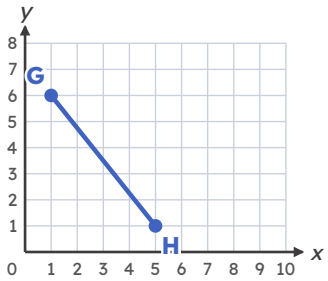

3

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

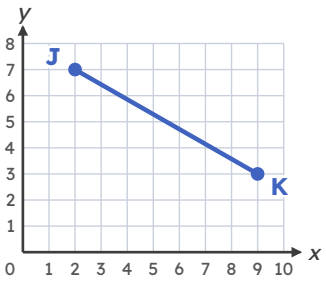

4

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

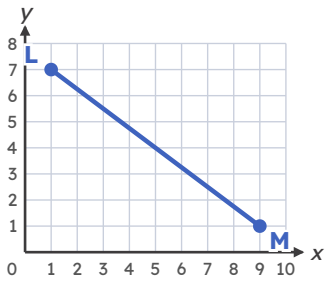

5

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

6

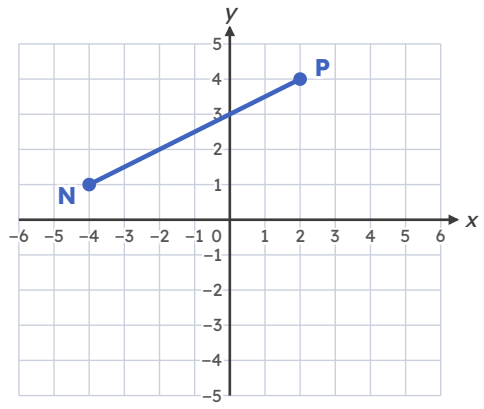

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

YOU DO Questions 7–12: these intervals cross the axes. The first letter is (x_1, y_1). Find the run and rise.

REMEMBER Put negative numbers in brackets: 2 − (−4) = 2 + 4 = 6.

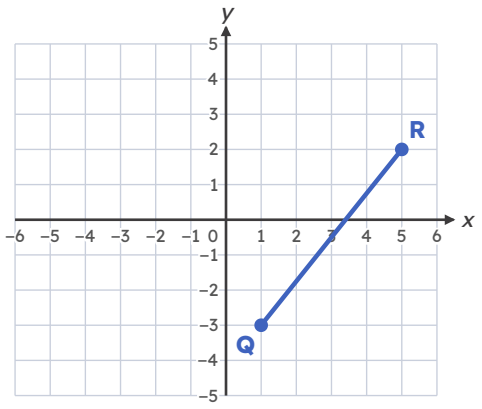

7

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

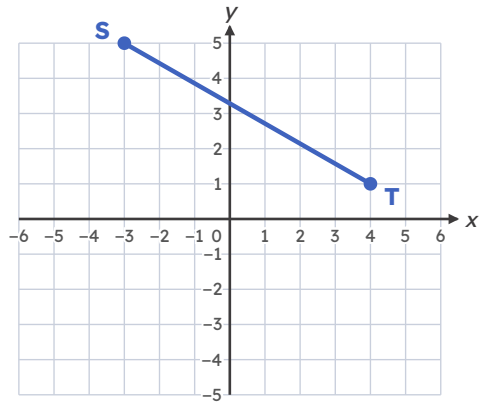

8

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

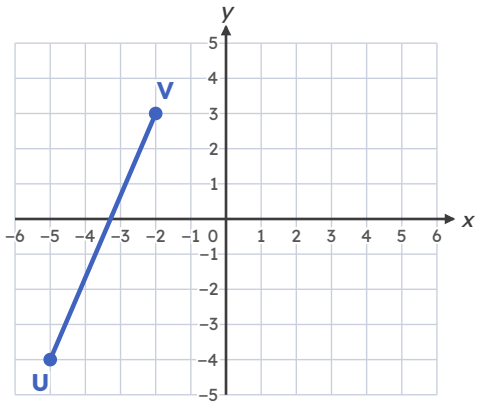

9

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

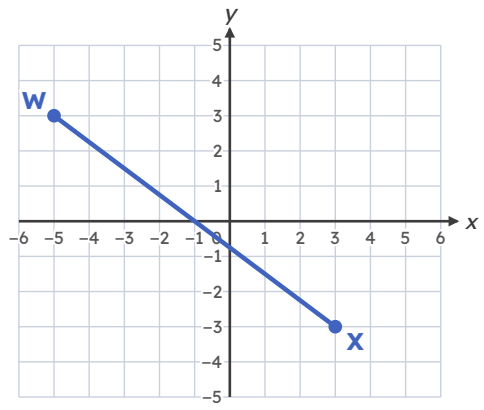

10

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

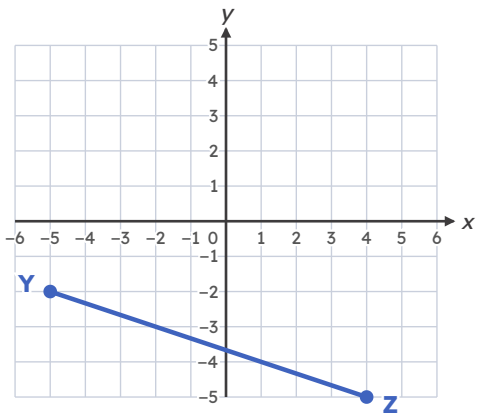

11

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____

12

Run = $x_2 - x_1$ = _____

Rise = $y_2 - y_1$ = _____
