KINGSCLIFF HIGH SCHOOL
ACHIEVEMENT THROUGH ENDEAVOUR

YEAR 9 STANDARD

CHAPTER 10

YEAR 9 MATHEMATICS

Surface area and volume

10 lessons · three pages each · Easy drill, then Medium and worded problems

10.1 Metric units
10.2 Precision and absolute error
10.3 Percentage error
10.4 Perimeter and area of composite shapes
10.5 Areas of quadrilaterals
10.6 Circumference and arc length
10.7 Areas of circles and sectors
10.8 Surface area of a prism
10.9 Surface area of a cylinder
10.10 Volumes of prisms and cylinders

NAME _____ CLASS _____ TEACHER _____

Artwork: a silver spiral on the western edge of Seahorse Valley, coloured in purple and silver, part of the Mandelbrot set.

How to use this booklet

1. Each lesson is **three pages**. Read the **learning intention**, copy your teacher's notes into the **Notes** box, and tick each **success criterion** when you can do it.

2. Pages 1 and 2 are **Easy**: small steps, one round at a time. Page 3 is **Medium**, then three **worded problems**.

WE DO **Grey boxes.** Your teacher works each example on the board. **Copy every step** into the space.

YOU DO **Blue boxes.** Your turn. The **?** on each diagram shows what to find. Write the **formula**, **substitute** the numbers, then the **answer** with its unit.

3. Some Medium questions come from earlier lessons. The tag (like **10.2** or **Year 8**) says which one.

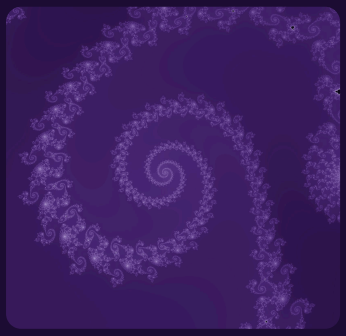

4. Stuck? Read the **Remember** line in the blue box, then look back at your notes and the example. Answers with π: **one decimal place** unless the question says otherwise.

Contents and progress tracker

Lesson	Topic	Page	Date	Done
10.1	Metric units	3		☐
10.2	Precision and absolute error	6		☐
10.3	Percentage error	9		☐
10.4	Perimeter and area of composite shapes	12		☐
10.5	Areas of quadrilaterals	15		☐
10.6	Circumference and arc length	18		☐
10.7	Areas of circles and sectors	21		☐
10.8	Surface area of a prism	24		☐
10.9	Surface area of a cylinder	27		☐
10.10	Volumes of prisms and cylinders	30		☐

In this chapter you will

- convert between metric units, including very large and very small units
- find the precision, absolute error and percentage error of a measurement
- find the perimeter and area of composite shapes and quadrilaterals
- find the circumference, arc length and area of circles, sectors and composite shapes
- find the surface area of prisms and cylinders
- find the volume and capacity of prisms and cylinders

About the artwork

The pictures in this booklet are parts of the **Mandelbrot set**, drawn by a computer that repeats one simple rule, $z \to z^2 + c$, thousands of times for every point. Every booklet shows a different part of the set: this one is a silver spiral on the western edge of Seahorse Valley, coloured in purple and silver. Maths can make beautiful things.

Acknowledgement of Country

We acknowledge the Bundjalung people, the Traditional Custodians of the land on which Kingscliff High School stands, and pay our respects to Elders past and present.

10.1 Metric units

EASY

Learning intention We are learning to convert between metric units, including time and digital storage.

Success criteria
- ☐ I can convert units of length, mass and capacity
- ☐ I can convert units of time and digital storage
- ☐ I can use the prefixes mega-, giga- and micro-

NOTES — Key ideas for this lesson

TEACHER COPY

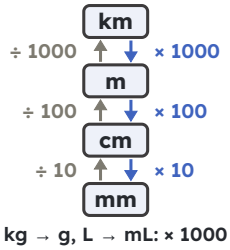

KEY TERMS

kilo- (k): a thousand: 1 km = 1000 m
centi- (c): a hundredth: 1 cm = 0.01 m
milli- (m): a thousandth: 1 mm = 0.001 m
micro- (μ): a millionth: 1 μm = 0.000 001 m
mega- (M): a million: 1 ML = 1 000 000 L
giga- (G): a billion: 1 GB = 1 000 000 000 B
capacity: how much a container holds

FORMULAS

Bigger unit → smaller unit: ×
Smaller unit → bigger unit: ÷
1 kg = 1000 g · 1 t = 1000 kg
1 L = 1000 mL · 1 kL = 1000 L
1 h = 60 min · 1 min = 60 s

STEPS 1 bigger or smaller unit? 2 write the rule 3 work it out 4 write the new unit

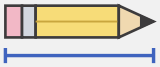

kg → g, L → mL: × 1000

WE DO — With your teacher: copy what they write on the board.

Example 1 Convert each one. To a smaller unit, multiply. To a bigger unit, divide.

a Length

b Length

c Mass

d Capacity

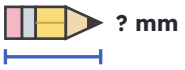

YOU DO — On your own: work down the box, one round at a time. Show your working.

8 QUESTIONS

REMEMBER To a smaller unit, multiply · To a bigger unit, divide · 1 km = 1000 m · 1 m = 100 cm · 1 cm = 10 mm

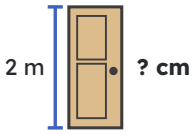

ROUND 1 — Questions 1–4: convert each length to the smaller unit.

1

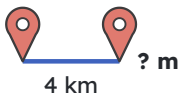

Rule: × 10
Working:
Answer:

2

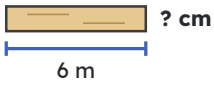

Rule: × 100
Working:
Answer:

3

Rule: × 1000
Working:
Answer:

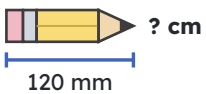

4

Rule: × 100
Working:
Answer:

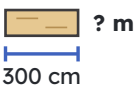

ROUND 2 — Questions 5–8: convert each length to the bigger unit.

5

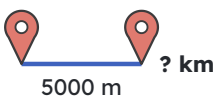

Rule: ÷ 10
Working:
Answer:

6

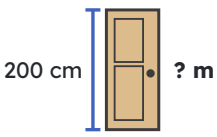

Rule: ÷ 100
Working:
Answer:

7

Rule: ÷ 1000
Working:
Answer:

8

Rule: ÷ 100
Working:
Answer:

10.1 Metric units

EASY

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER 1 kg = 1000 g · 1 L = 1000 mL · 1 min = 60 s · 1 h = 60 min · To a smaller unit, ×. To a bigger unit, ÷.

ROUND 3 Questions 9–11: convert each mass.

9

Rule × 1000
Working
Answer

10

Rule ÷ 1000
Working
Answer

11

Rule × 1000
Working
Answer

ROUND 4 Questions 12–14: convert each capacity.

12

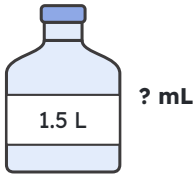

Rule × 1000
Working
Answer

13

Rule ÷ 1000
Working
Answer

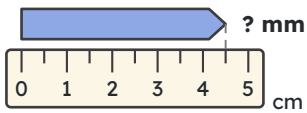

14

Rule × 1000
Working
Answer

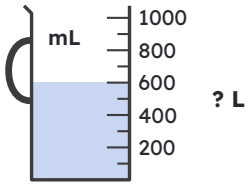

ROUND 5 Questions 15–17: × or ÷? Write the rule, then convert. Read the scales carefully.

15

Rule
Working
Answer

16

Rule
Working
Answer

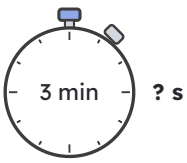

17

Rule
Working
Answer

ROUND 6 Questions 18–20: convert each time. 1 min = 60 s and 1 h = 60 min.

18

Rule × 60
Working
Answer

19

Rule × 60
Working
Answer

20

Rule ÷ 60
Working
Answer

10.1 Metric units

MEDIUM

WE DO With your teacher: copy what they write on the board.

Example 2 **Convert each one. Write the rule first.**

a Time

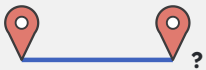

? min

b Storage

? MB

c Two steps

? cm

d Micro

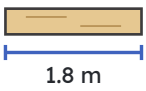

? µm

YOU DO On your own: work in order. A tag shows an earlier lesson. Show your working. 9 QUESTIONS

REMEMBER 1 GB = 1000 MB · 1 ML = 1 000 000 L · 1 g = 1000 mg · 1 mm = 1000 µm · m → mm: × 100, then × 10

1 Length

9 Find 15% of 60 kg. Year 8

Answer _____

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A phone has 64 GB of free space. Each video is 800 MB. How many videos fit on the phone?

Answer _____

2 Mia runs laps of a 400 m track. How many laps does she run to cover 6 km?

Answer _____

3 A movie runs for 135 minutes. It starts at 7:30 pm. At what time does it finish?

Answer _____

10.2 Precision and absolute error

EASY

Learning intention We are learning to find the precision, absolute error and limits of accuracy.

Success criteria
- ☐ I can find the precision of a scale or a measurement
- ☐ I can find the absolute error: precision ÷ 2
- ☐ I can write the limits of accuracy: m ± absolute error

NOTES — Key ideas for this lesson

TEACHER COPY

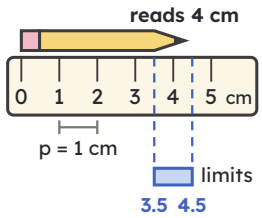

KEY TERMS

precision (p): the size of one small space on a scale
jump: the difference between two numbers
p of a measurement: the place value of its last digit
absolute error: half the precision
m: the measurement
true value: the exact size, which we never know
limits of accuracy: the true value is between them

FORMULAS

p = jump ÷ spaces
p of 3.45 m = 0.01 m
Abs. error = p ÷ 2
Limits = m ± abs. error

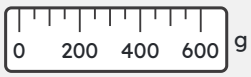

STEPS 1 find p 2 abs. error = p ÷ 2
3 lower = m − abs. error
4 upper = m + abs. error

WE DO — With your teacher: copy what they write on the board.

Example 1 Find the precision, the absolute error or the limits of accuracy.

a Precision

b Abs. error

c Abs. error

d Limits

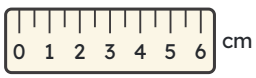

YOU DO — On your own: work down the box, one round at a time. Show your working.

6 QUESTIONS

REMEMBER p = jump between two numbers ÷ number of spaces between them · Abs. error = p ÷ 2

ROUND 1 — Questions 1–3: find the precision of each scale: the size of one small space.

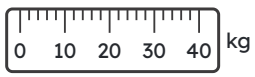

1

precision = ?

Formula: p = jump ÷ spaces
Substitute:
Answer:

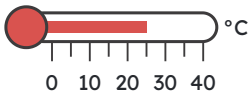

2

precision = ?

Formula: p = jump ÷ spaces
Substitute:
Answer:

3

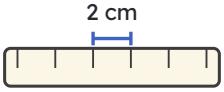

precision = ?

Formula: p = jump ÷ spaces
Substitute:
Answer:

ROUND 2 — Questions 4–6: find the absolute error. The precision (one small space) is given.

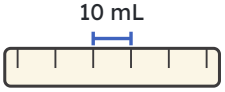

4

abs. error = ?

Formula: Abs. error = p ÷ 2
Substitute:
Answer:

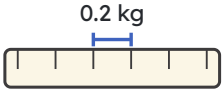

5

abs. error = ?

Formula: Abs. error = p ÷ 2
Substitute:
Answer:

6

abs. error = ?

Formula: Abs. error = p ÷ 2
Substitute:
Answer:

10.2 Precision and absolute error

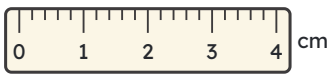

EASY

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER p = jump ÷ spaces · Abs. error = p ÷ 2 · p of 3.45 m = 0.01 m (its last digit) · Limits = m ± abs. error

ROUND 3 Questions 7–9: find the absolute error of each scale.

7

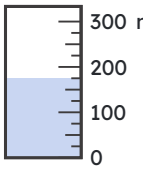

abs. error = ?

Formula: Abs. error = p ÷ 2

Substitute:

Answer:

8

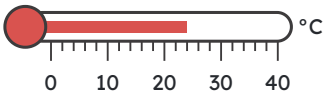

abs. error = ?

Formula: Abs. error = p ÷ 2

Substitute:

Answer:

9

abs. error = ?

Formula: Abs. error = p ÷ 2

Substitute:

Answer:

ROUND 4 Questions 10–12: write the formula, then find the absolute error. The last digit gives p.

10

3.45 m

abs. error = ?

Formula:

Substitute:

Answer:

11

abs. error = ?

Formula:

Substitute:

Answer:

12

abs. error = ?

Formula:

Substitute:

Answer:

ROUND 5 Questions 13–15: find the limits of accuracy of each measurement.

13

6 m

limits = ?

Formula: Limits = m ± abs. error

Substitute:

Answer:

14

limits = ?

Formula: Limits = m ± abs. error

Substitute:

Answer:

15

limits = ?

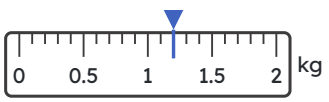

Formula: Limits = m ± abs. error

Substitute:

Answer:

ROUND 6 Questions 16–18: read each scale, then find the limits of accuracy.

16

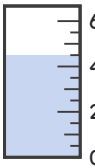

limits = ?

Formula: Limits = m ± abs. error

Substitute:

Answer:

17

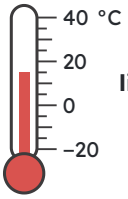

limits = ?

Formula: Limits = m ± abs. error

Substitute:

Answer:

18

limits = ?

Formula: Limits = m ± abs. error

Substitute:

Answer:

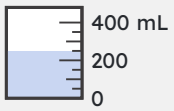

10.2 Precision and absolute error

MEDIUM

WE DO With your teacher: copy what they write on the board.

Example 2 **Find the limits of accuracy of each measurement.**

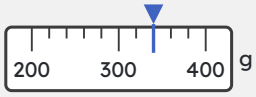

a Limits

b Limits

c Limits

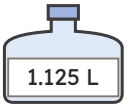

d Could it be 3.46 kg?

YOU DO On your own: work in order. A tag shows an earlier lesson. Show your working. 9 QUESTIONS

REMEMBER Lower limit = m − abs. error · Upper limit = m + abs. error · The true value is between the limits

1 Abs. error

Answer _____

7 Convert 10.1

= ? min

Rule _____

Working _____

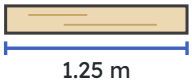

Answer _____

8 These are the limits of accuracy of a length. Find the length and its absolute error.

Answer _____

9 Could this plank really be 1.256 m long? Explain.

Answer _____

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A nurse's thermometer is marked every 0.4 °C. It shows 37.2 °C. A fever is 37.5 °C or above. Could the patient have a fever? Explain.

Answer _____

2 Two planks are each 1.5 m long, to the nearest 0.1 m. They are laid end to end. Find the smallest and the largest possible total length.

Answer _____

3 Sam ran 100 m in 13.4 s, timed to the nearest 0.1 s. Ali ran it in 13.36 s. Can we be sure that Ali was faster? Explain.

Answer _____

10.3 Percentage error

EASY

Learning intention We are learning to find percentage errors and use them to compare accuracy.

Success criteria
- ☐ I can find the absolute error: half the precision
- ☐ I can calculate percentage error = E ÷ M × 100%
- ☐ I can decide which measurement is more accurate

NOTES — Key ideas for this lesson

TEACHER COPY

KEY TERMS

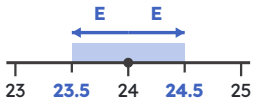

precision (p): the place value of the last digit, or one mark on a scale
absolute error (E): half the precision: the most the measurement can be out by
measurement (M): the value that was measured
percentage error: E as a percentage of M
more accurate: the smaller percentage error

FORMULAS

E = p ÷ 2
% error = E ÷ M × 100%
Limits: M − E to M + E
Smaller % error: more accurate

STEPS 1 find p 2 E = p ÷ 2 3 E ÷ M × 100 4 round + %

24 m, nearest m

E = 1 ÷ 2 = 0.5 m
% error = 0.5 ÷ 24 × 100
= 2.1%

WE DO — With your teacher: copy what they write on the board.

Example 1 Find each absolute error or percentage error, to one decimal place where needed.

a Absolute error

E = ?

b % error

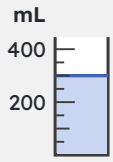

E = 0.5 m
% error = ?

c % error

% error = ?

d % error

% error = ?

YOU DO — On your own: work down the box, one round at a time. Show your working.

6 QUESTIONS

REMEMBER p: the place value of the last digit (3.6 kg → 0.1 kg) · E = p ÷ 2 · % error = E ÷ M × 100

ROUND 1 — Questions 1–3: find the absolute error E of each measurement.

1

E = ?
nearest m

Formula **E = p ÷ 2**
Substitute
Answer

2

E = ?

Formula **E = p ÷ 2**
Substitute
Answer

3

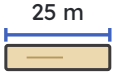

E = ?

Formula **E = p ÷ 2**
Substitute
Answer

ROUND 2 — Questions 4–6: find the percentage error. The absolute error E is given.

4

E = 0.5 m
% error = ?

Formula **% error = E ÷ M × 100**
Substitute
Answer

5

E = 0.5 kg
% error = ?

Formula **% error = E ÷ M × 100**
Substitute
Answer

6

E = 0.05 L
% error = ?

Formula **% error = E ÷ M × 100**
Substitute
Answer

10.3 Percentage error

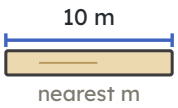

EASY

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER E = p ÷ 2 · % error = E ÷ M × 100 · On a scale, p = the gap between two marks · Round to one decimal place.

ROUND 3 Questions 7–9: find the percentage error. Find E first.

7

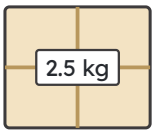

% error = ?

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

8

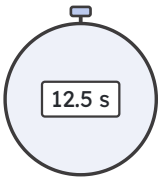

% error = ?

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

9

% error = ?

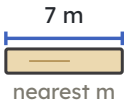

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

ROUND 4 Questions 10–12: write the formula, then find the percentage error.

10

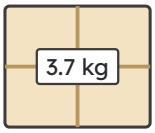

% error = ?

Formula _____

E = p ÷ 2 _____

Answer _____

11

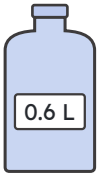

% error = ?

Formula _____

E = p ÷ 2 _____

Answer _____

12

% error = ?

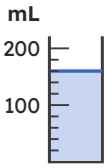

Formula _____

E = p ÷ 2 _____

Answer _____

ROUND 5 Questions 13–15: read the scale, then find the percentage error. p is one mark.

13

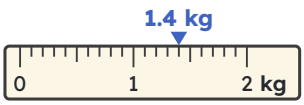

% error = ?

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

14

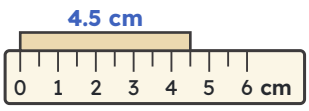

% error = ?

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

15

% error = ?

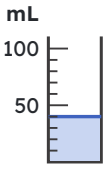

Formula % error = E ÷ M × 100

E = p ÷ 2 _____

Answer _____

ROUND 6 Questions 16–18: write the formula, then find the percentage error.

16

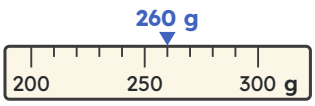

% error = ?

Formula _____

E = p ÷ 2 _____

Answer _____

17

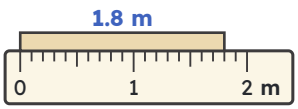

% error = ?

Formula _____

E = p ÷ 2 _____

Answer _____

18

% error = ?

Formula _____

E = p ÷ 2 _____

Answer _____

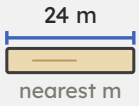

10.3 Percentage error

MEDIUM

WE DO With your teacher: copy what they write on the board.

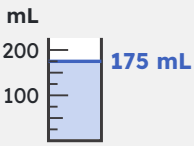

Example 2 Give each answer correct to two decimal places.

a % error

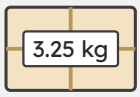

nearest m

b % error

c % error

d Most accurate?

a 24 m

b 175 mL

c 3.25 kg

YOU DO On your own: work in order. A tag shows an earlier lesson. Show your working. 9 QUESTIONS

REMEMBER % error = E ÷ M × 100, to two decimal places · On a scale, p = one mark · Smaller % error: more accurate

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 Mia's pencil is 15 cm long and she is 168 cm tall, both to the nearest cm. Which measurement is more accurate? Give both percentage errors to two decimal places.

Answer

2 A 100 m sprint is timed as 12.4 s. Find the percentage error of the time, correct to two decimal places.

Answer

3 A jug marked every 50 mL shows 750 mL. Kai says the percentage error is 6.67%. What mistake did he make? Find the correct percentage error.

Answer

10.4 Perimeter and area of composite shapes

EASY

Learning intention We are learning to find the perimeter and area of composite shapes.

Success criteria
- ☐ I can find missing side lengths, then the perimeter
- ☐ I can find an area by splitting a shape into parts
- ☐ I can find a shaded area by subtracting

NOTES — Key ideas for this lesson

TEACHER COPY

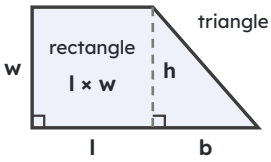

KEY TERMS

composite shape: simple shapes joined together
perimeter (P): the distance around the outside
area (A): the space inside (cm², m²)
missing side: use the opposite sides: whole − part
split: cut the shape into parts with a dashed line
height (h): at right angles to the base (b)
shaded area: the whole shape − the white hole

FORMULAS

Rectangle: A = l × w
Triangle: A = ½ × b × h
Split: A = part 1 + part 2
Shaded: A = whole − hole
Perimeter: add every outside side

STEPS 1 find missing sides
2 split, or subtract 3 area of each part
4 add or subtract + unit

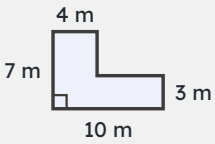

A = l × w + ½ × b × h

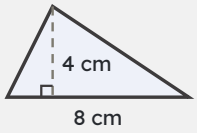

WE DO — With your teacher: copy what they write on the board.

Example 1 Find the perimeter or area. Find any missing sides first.

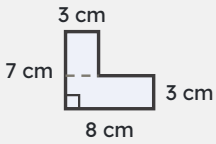

a Perimeter

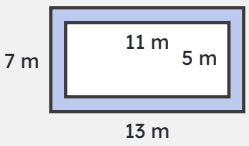

b Area

c Area

d Shaded area

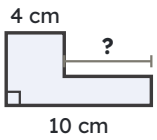

YOU DO — On your own: work down the box, one round at a time. Show your working.

6 QUESTIONS

REMEMBER Missing side = whole side − the other part · Perimeter: add every side, the missing ones too.

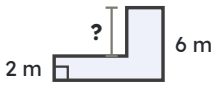

ROUND 1 — Questions 1–3: find the missing side.

1

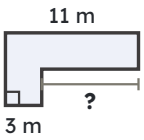

Formula: ? = whole − part
Substitute:
Answer:

2

Formula: ? = whole − part
Substitute:
Answer:

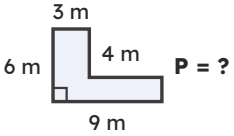

3

Formula: ? = whole − part
Substitute:
Answer:

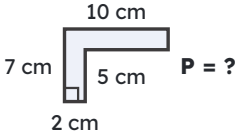

ROUND 2 — Questions 4–6: find the perimeter. Find the two missing sides first.

4

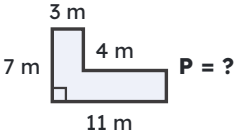

Formula: P = add all sides
Substitute:
Answer:

5

Formula: P = add all sides
Substitute:
Answer:

6

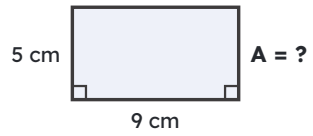

Formula: P = add all sides
Substitute:
Answer:

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER Rectangle A = l × w · Triangle A = ½ × b × h · Split: add the parts · Shaded: whole − hole

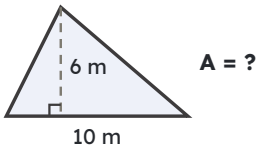

ROUND 3 Questions 7–9: find the area of each rectangle or triangle.

7

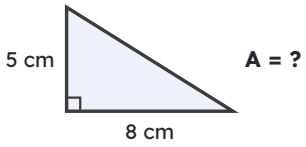

Formula A = l × w
Substitute
Answer

8

Formula A = ½ × b × h
Substitute
Answer

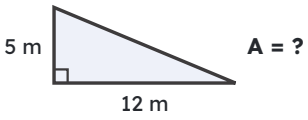

9

Formula A = ½ × b × h
Substitute
Answer

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 An L-shaped room is made of a 6 m by 4 m rectangle and a 3 m by 2 m rectangle. Carpet costs \$45 per m². Find the cost to carpet the room.

Answer _____

2 An L-shaped garden bed has outside edges of 8 m and 6 m. Each arm of the L is 2 m wide. Edging costs \$15 per metre. Find the cost to edge the whole bed.

Answer _____

3 The end wall of a shed is a rectangle 4 m wide and 2.5 m high, with a triangle 1.5 m high on top. It has a door 0.9 m wide and 2 m high. Find the area of the wall to paint.

Answer _____

10.5 Areas of quadrilaterals

EASY

Learning intention We are learning to find the area of a parallelogram, a trapezium, a rhombus and a kite.

Success criteria
- ☐ I can use A = bh for a parallelogram
- ☐ I can use A = ½(a + b)h for a trapezium
- ☐ I can use A = ½xy for a rhombus or a kite

NOTES — Key ideas for this lesson

TEACHER COPY

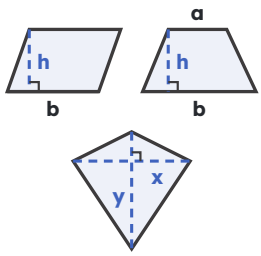

KEY TERMS

parallelogram: two pairs of parallel sides
trapezium: one pair of parallel sides, a and b
rhombus: a parallelogram with 4 equal sides
kite: two pairs of equal sides, next to each other
base (b): the side the height is measured from
height (h): perpendicular (at right angles) to b
diagonals (x, y): join opposite corners

FORMULAS

Parallelogram: A = bh
Trapezium: A = ½(a + b)h
Rhombus or kite: A = ½xy
Missing length: substitute, then solve

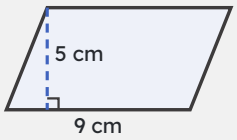

STEPS 1 name the shape
2 write the formula 3 substitute
4 work out + unit (cm²)

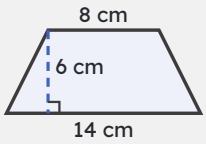

WE DO — With your teacher: copy what they write on the board.

Example 1 Find the area of each shape. Write the formula first.

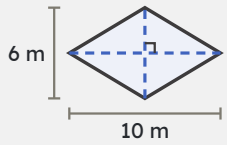

a Parallelogram

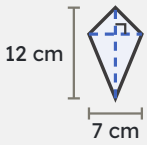

b Trapezium

c Rhombus

d Kite

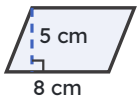

YOU DO — On your own: work down the box, one round at a time. Show your working.

8 QUESTIONS

REMEMBER h is the perpendicular height (the dashed line), at right angles to the base · a and b are the parallel sides.

ROUND 1 — Questions 1–4: find the area of each parallelogram.

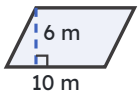

1

A = ?

Formula A = bh
Substitute
Answer

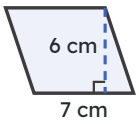

2

A = ?

Formula A = bh
Substitute
Answer

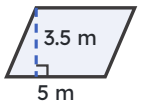

3

A = ?

Formula A = bh
Substitute
Answer

4

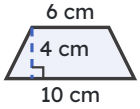

A = ?

Formula A = bh
Substitute
Answer

ROUND 2 — Questions 5–8: find the area of each trapezium.

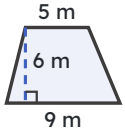

5

A = ?

Formula A = ½(a + b)h
Substitute
Answer

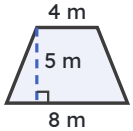

6

A = ?

Formula A = ½(a + b)h
Substitute
Answer

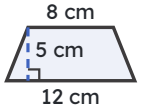

7

A = ?

Formula A = ½(a + b)h
Substitute
Answer

8

A = ?

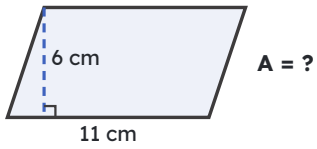

Formula A = ½(a + b)h
Substitute
Answer

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER Parallelogram A = bh · Trapezium A = ½(a + b)h · Rhombus or kite A = ½xy (x and y are the diagonals)

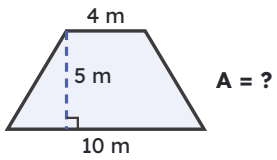

ROUND 3 Questions 9–11: parallelogram or trapezium? Write the formula, then find the area.

9

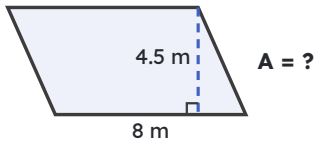

Formula _____
Substitute _____
Answer _____

10

Formula _____
Substitute _____
Answer _____

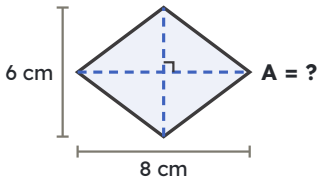

11

Formula _____
Substitute _____
Answer _____

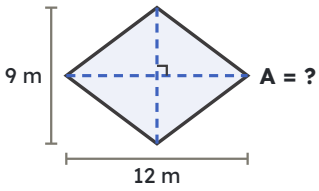

ROUND 4 Questions 12–14: find the area of each rhombus.

12

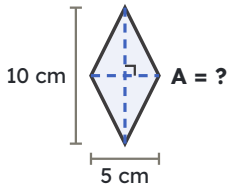

Formula A = ½xy
Substitute _____
Answer _____

13

Formula A = ½xy
Substitute _____
Answer _____

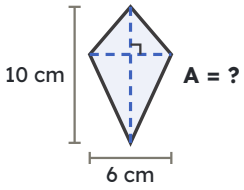

14

Formula A = ½xy
Substitute _____
Answer _____

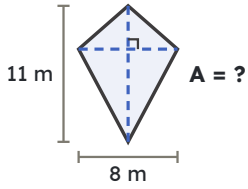

ROUND 5 Questions 15–17: find the area of each kite.

15

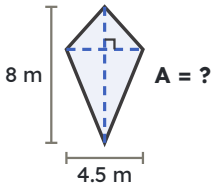

Formula A = ½xy

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A courtyard is a parallelogram with base 8.5 m and perpendicular height 6 m. Pavers cost $42 per m². Find the cost of paving the courtyard.

Answer _____

2 A kite is made from two rods, 80 cm and 50 cm long, that cross at right angles. Find the area of material needed to cover it.

Answer _____

3 A block of land is a trapezium with parallel sides of 30 m and 45 m. Its area is 750 m². Find the distance between the parallel sides.

Answer _____

10.6 Circumference and arc length

EASY

Learning intention We are learning to find circumferences, arc lengths and perimeters of curved shapes.

Success criteria
- ☐ I can use C = πd or C = 2πr to find a circumference
- ☐ I can find an arc length: θ ÷ 360 × 2πr
- ☐ I can find the perimeter of sectors and composite shapes

NOTES — Key ideas for this lesson

TEACHER COPY

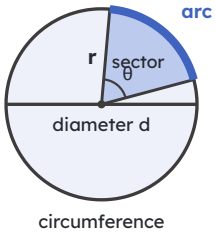

KEY TERMS

circumference (C): the distance around a circle
radius (r): from the centre to the edge
diameter (d): across through the centre; d = 2r
arc: part of the circumference
sector: a slice of a circle between two radii
θ: the angle at the centre of a sector
perimeter: the distance around a shape

FORMULAS

C = πd = 2πr
Arc length = θ ÷ 360 × 2πr
Semicircle: P = ½πd + d
Quadrant: P = ¼ × 2πr + 2r
Sector: P = arc + 2r

STEPS 1 r = d ÷ 2 2 write the formula 3 substitute (π key) 4 round to 1 d.p. + unit

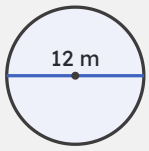

WE DO — With your teacher: copy what they write on the board.

Example 1 Find each circumference or perimeter, correct to one decimal place.

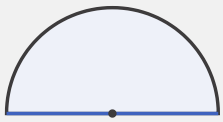

a Circumference

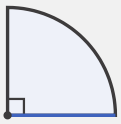

b Circumference

c Perimeter

d Perimeter

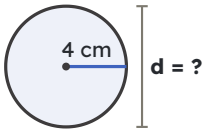

YOU DO — On your own: work down the box, one round at a time. Show your working.

8 QUESTIONS

REMEMBER d = 2r · r = d ÷ 2 · C = πd · Use the π key, then round to one decimal place.

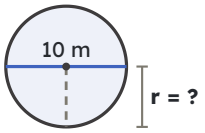

ROUND 1 — Questions 1–4: find the diameter or the radius.

1

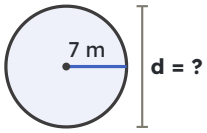

Formula: d = 2r
Substitute:
Answer:

2

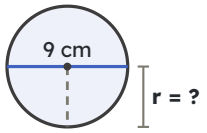

Formula: r = d ÷ 2
Substitute:
Answer:

3

Formula: d = 2r
Substitute:
Answer:

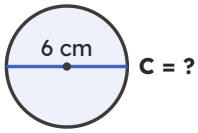

4

Formula: r = d ÷ 2
Substitute:
Answer:

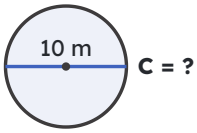

ROUND 2 — Questions 5–8: find the circumference. The diameter is given.

5

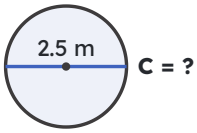

Formula: C = πd
Substitute:
Answer:

6

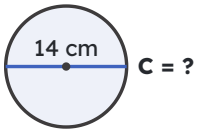

Formula: C = πd
Substitute:
Answer:

7

Formula: C = πd
Substitute:
Answer:

8

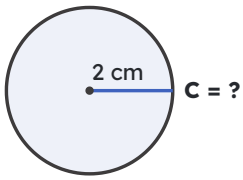

Formula: C = πd
Substitute:
Answer:

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER C = 2πr = πd · Semicircle P = ½πd + d · Quadrant P = ¼ × 2πr + 2r · Find d first when r is given.

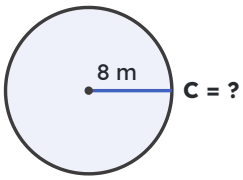

ROUND 3 Questions 9–11: find the circumference. The radius is given.

9

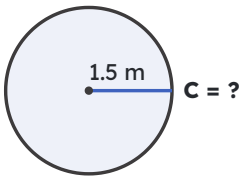

Formula C = 2πr
Substitute
Answer

10

Formula C = 2πr
Substitute
Answer

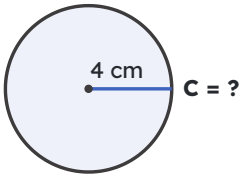

11

Formula C = 2πr
Substitute
Answer

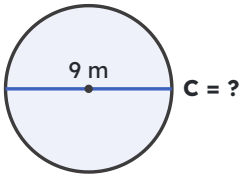

ROUND 4 Questions 12–14: is it r or d? Write the right formula, then find the circumference.

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A round garden bed has a diameter of 3.2 m. Edging costs $12 per metre. Find the cost to edge the bed, to the nearest dollar.

Answer _____

2 A bike wheel has a radius of 33 cm. How many full turns does it make to travel 1 km?

Answer _____

3 A running track is a rectangle 84 m long with a semicircle on each end. Each semicircle has a diameter of 64 m. Find one lap, to the nearest metre.

Answer _____

10.7 Areas of circles and sectors

EASY

Learning intention We are learning to find the areas of circles, semicircles, quadrants, sectors and composite shapes.

Success criteria
- ☐ I can use $A = \pi r^2$ to find the area of a circle
- ☐ I can find the area of a sector: $\theta \div 360 \times \pi r^2$
- ☐ I can find composite and shaded areas

NOTES — Key ideas for this lesson

TEACHER COPY

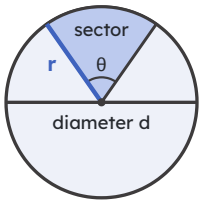

KEY TERMS

area (A): the space inside a shape, in square units
radius (r): from the centre to the edge
diameter (d): across through the centre; $r = d \div 2$
semicircle: half a circle
quadrant: a quarter of a circle
sector: a slice between two radii, angle θ
shaded area: the whole shape – the part cut out

FORMULAS

Circle: $A = \pi r^2$
Semicircle: $A = \frac{1}{2}\pi r^2$
Quadrant: $A = \frac{1}{4}\pi r^2$
Sector: $A = \theta \div 360 \times \pi r^2$
Ring: $A = \pi R^2 - \pi r^2$ **(R outer, r inner)**

STEPS 1 $r = d \div 2$ 2 write the formula 3 substitute (π key) 4 round to 1 d.p. + unit²

circle: $A = \pi r^2$

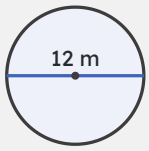

WE DO — With your teacher: copy what they write on the board.

Example 1 Find the area of each shape, correct to one decimal place.

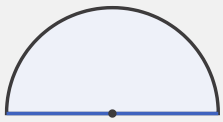

a Area

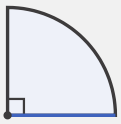

b Area

c Area

d Area

YOU DO — On your own: work down the box, one round at a time. Show your working.

8 QUESTIONS

REMEMBER $A = \pi r^2$ · $r = d \div 2$ · Use the π key, then round to one decimal place · Area units: cm², m².

ROUND 1 — Questions 1–4: find the area of each circle. The radius is given.

1

1 A garden sprinkler sprays water 6 m and turns through an angle of 120°. Find the area of lawn it waters.

Answer _____

2 A round pond has a radius of 3 m. A path 1 m wide goes all the way around it. Find the area of the path.

Answer _____

3 A pizza has a diameter of 30 cm. It is cut into 8 equal slices. Find the area of one slice.

Answer _____

10.8 Surface area of a prism

EASY

Learning intention We are learning to find the surface area of a prism by adding the areas of its faces.

Success criteria
- ☐ I can find the area of each face of a prism
- ☐ I can use SA = 6s² and SA = 2(lw + lh + wh)
- ☐ I can find the surface area of triangular prisms and open boxes

NOTES — Key ideas for this lesson

TEACHER COPY

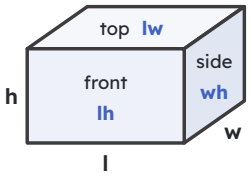

KEY TERMS

prism: the same cross-section all the way along
face: a flat surface of a solid
surface area (SA): the total area of all the faces
cube: 6 equal square faces
rectangular prism: 3 pairs of equal rectangles
triangular prism: 2 triangles and 3 rectangles
no lid: an open box: leave out the top

FORMULAS

Cube: SA = 6s²
Rectangular prism: SA = 2(lw + lh + wh)
Triangular prism: SA = bh + perimeter × l
No lid: SA = lw + 2lh + 2wh
Any prism: 2 × end + perimeter × length

STEPS 1 name the faces 2 area of each face 3 add them up 4 unit² (cm²)

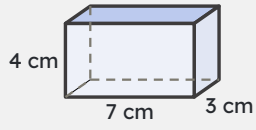

SA = 2(lw + lh + wh)

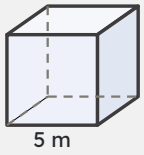

WE DO — With your teacher: copy what they write on the board.

Example 1 Find each area. Surface area (SA) is the total area of all the faces.

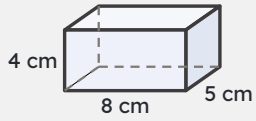

a Shaded face

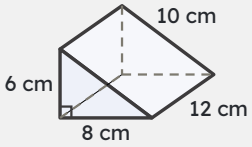

b Surface area

c Surface area

d Surface area

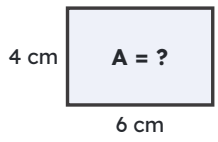

YOU DO — On your own: work down the box, one round at a time. Show your working.

7 QUESTIONS

REMEMBER Each face is a rectangle: A = l × w · Front: l × h · Top: l × w · Side: w × h · Areas are in square units (cm²).

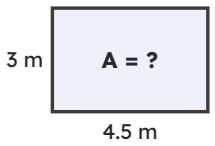

ROUND 1 — Questions 1–4: find the area of each face.

1

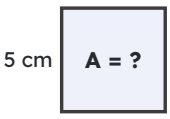

Formula A = l × w
Substitute
Answer

2

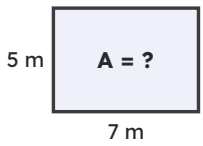

Formula A = l × w
Substitute
Answer

3

Formula A = l × w
Substitute
Answer

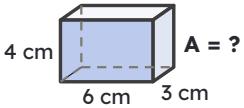

4

Formula A = l × w
Substitute
Answer

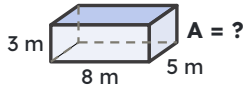

ROUND 2 — Questions 5–7: find the area of the shaded face of each rectangular prism.

5

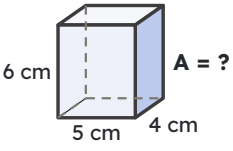

Formula A = l × h
Substitute
Answer

6

Formula A = l × w
Substitute
Answer

7

Formula A = w × h
Substitute
Answer

10.8 Surface area of a prism

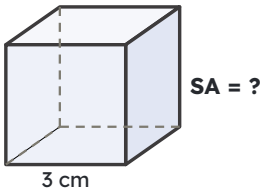

EASY

YOU DO On your own: keep going, one round at a time. Show your working. 12 QUESTIONS

REMEMBER Cube: SA = $6s^2$ · Rectangular prism: SA = 2(lw + lh + wh) · Triangular prism: 2 triangles + 3 rectangles

ROUND 3 Questions 8–10: find the surface area of each cube.

8

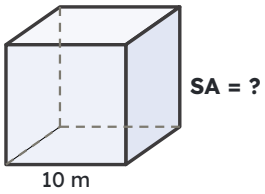

Formula SA = $6s^2$

Substitute

Answer

9

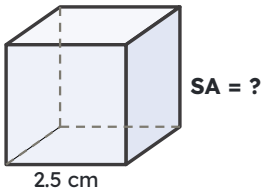

Formula SA = $6s^2$

Substitute

Answer

10

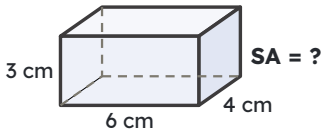

Formula SA = $6s^2$

Substitute

Answer

ROUND 4 Questions 11–13: find the surface area of each rectangular prism.

11

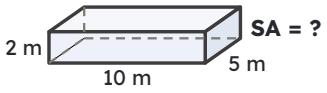

Formula SA = 2(lw + lh + wh)

Substitute

Answer

12

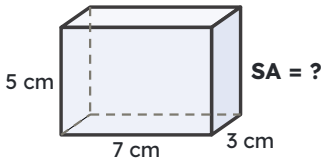

Formula SA = 2(lw + lh + wh)

Substitute

Answer

13

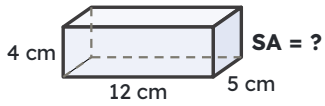

Formula SA = 2(lw + lh + wh)

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A gift box is 30 cm long, 20 cm wide and 10 cm high. Find the area of paper needed to cover it exactly.

Answer _____

2 A room is 5 m long, 4 m wide and 2.5 m high. 1 L of paint covers 10 m². How many litres of paint are needed for the four walls and the ceiling?

Answer _____

3 A tent is a triangular prism 4 m long. Each end is a triangle: base 3 m, height 2 m, sloping sides 2.5 m. Find the area of canvas, including the floor.

Answer _____

10.9 Surface area of a cylinder

EASY

Learning intention We are learning to find the surface area of a cylinder: two circles and a rolled-up rectangle.

Success criteria
- ☐ I can find the area of a circular end: $A = \pi r^2$
- ☐ I can find the curved surface area: $A = 2\pi rh$
- ☐ I can find the surface area of closed and open cylinders

NOTES — Key ideas for this lesson

TEACHER COPY

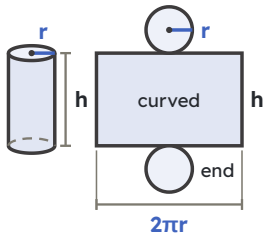

KEY TERMS

cylinder: a solid with two equal circular ends
radius (r): centre of an end to its edge; r = d ÷ 2
height (h): the distance between the two ends
curved surface: the side; flat, a 2πr by h rectangle
net: the flat shape that folds up into the solid
surface area (SA): the total area of all the surfaces
no lid: an open cylinder: one end only

FORMULAS

End: $A = \pi r^2$
Curved surface: $A = 2\pi rh$
Closed: $SA = 2\pi r^2 + 2\pi rh$
No lid: $SA = \pi r^2 + 2\pi rh$
Half cylinder: $SA = \pi r^2 + \pi rh + 2rh$

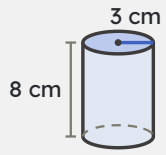

STEPS 1 r = d ÷ 2 2 list the surfaces 3 substitute (π key) 4 round to 1 d.p. + unit²

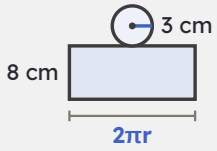

WE DO — With your teacher: copy what they write on the board.

Example 1 Find each area, correct to one decimal place.

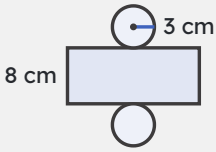

a End area

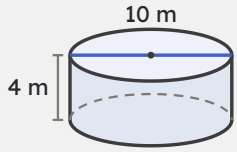

b Curved surface

c Surface area

d Surface area

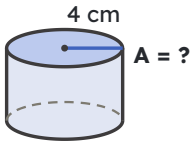

YOU DO — On your own: work down the box, one round at a time. Show your working.

7 QUESTIONS

REMEMBER End: $A = \pi r^2$ · Curved surface: $A = 2\pi rh$ (h is the height) · Use the π key · Round to one decimal place.

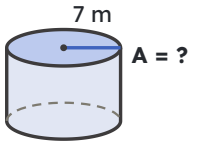

ROUND 1 — Questions 1–4: find the area of the shaded end of each cylinder.

1

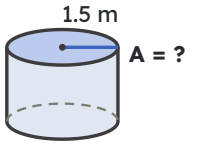

Formula A = πr²
Substitute
Answer

2

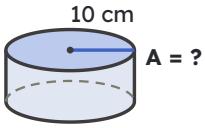

Formula A = πr²
Substitute
Answer

3

Formula A = πr²
Substitute
Answer

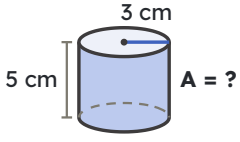

4

Formula A = πr²

WORDED PROBLEMS Draw a diagram if it helps, then solve. Show your working. 3 PROBLEMS

1 A closed cylindrical tank has a diameter of 2 m and a height of 1.5 m. Paint costs \$14 per m². Find the cost to paint the whole tank, to the nearest dollar.

Answer _____

2 A paint roller is a cylinder 25 cm long with a diameter of 6 cm. Find the area it paints in 10 full turns.

Answer _____

3 A bucket with no lid is a cylinder with a diameter of 30 cm and a height of 25 cm. Find the area of plastic needed to make it.

Answer _____

10.10 Volumes of prisms and cylinders

EASY

Learning intention We are learning to find the volume of a prism or a cylinder ($V = Ah$), and its capacity.

Success criteria
- ☐ I can use $V = Ah$ to find the volume of any prism
- ☐ I can use $V = \pi r^2 h$ to find the volume of a cylinder
- ☐ I can change between cm^3, mL, L and m^3

NOTES — Key ideas for this lesson

TEACHER COPY

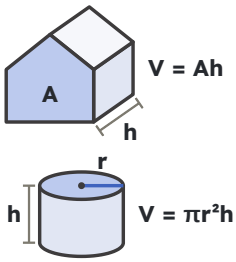

KEY TERMS

volume (V): the space inside a solid, in cubic units
prism: the same cross-section all along
cross-section (A): the end of the prism (shaded)
height of the prism (h): the distance between the two ends
cylinder: a solid whose cross-section is a circle
capacity: how much a container holds (mL, L)

FORMULAS

$V = Ah$
Cuboid: $V = lwh$
Triangular prism: $V = \frac{1}{2}bh \times l$ (b, h: the triangle; l: the length)
Cylinder: $V = \pi r^2 h$
$1\ cm^3 = 1\ mL \cdot 1\ m^3 = 1000\ L$

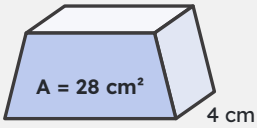

STEPS 1 find A, the end
2 write the formula 3 substitute (π key)
4 answer in cm^3 or m^3

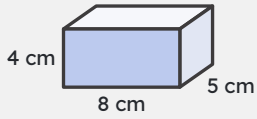

WE DO — With your teacher: copy what they write on the board.

Example 1 Find the volume of each solid. Give the cylinder correct to one decimal place.

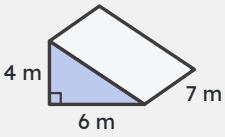

a Prism

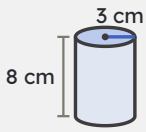

b Cuboid

c Triangular prism

d Cylinder

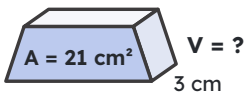

YOU DO — On your own: work down the box, one round at a time. Show your working.

6 QUESTIONS

REMEMBER $V = Ah$: A is the area of the shaded end, h the distance between the ends · Cuboid: $V = lwh$ · Units: cm^3, m^3

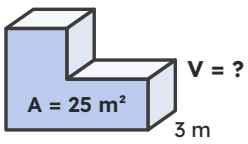

ROUND 1 — Questions 1–3: find the volume. The area of the shaded end is given.

1

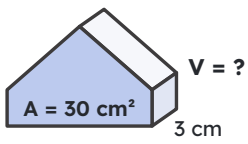

Formula V = Ah
Substitute
Answer

2

Formula V = Ah
Substitute
Answer
